Pulse and oxygen under control

(Hamburg) – Weinmann Diagnostics GmbH+Co.KG, Hamburg, is shipping a new non-invasive measuring device for spot checks on pulse frequency and partial oxygen saturation (SpO₂). Allowing for precise, fast and easy routine or continuous spot checks in doctors' offices, or on the go. Its convenient, very light design (72 gr. including batteries) predestines it for mobile use inn pre- or post-operative shortterm surveillance in the clinical environment. And adequate for toddler and adult alike.

Its integrated levelling-out of artefacts guarantees for the most plausible of measured values, e.g. when moving the finger while measuring. These permanently checked values are continuously shown on its lit LCD-monitor. Standard batteries instead of heavier storage batteries combined with its easy-to-handle design make smartOx best value for money (€399,-). The offering is completed by large set of one way or re-usable sensors.
